The new interface definitely brings a lot of improvements. It's important to note that for Lightroom 4, there are not as many legitimate Photoshop competitors than there were with Lightroom 3. Photoshop is Adobe's flagship product, and until it starts adopting some of the UI features of Lightroom, it will remain that way. Similarly, both the image editing and photo organization capabilities of Lightroom are far better than in any Windows-only competition. The new paper-like grid and revamped library are gradual improvements, but they are some of the most important since iPhoto 1.0. 1.0 still had a single "Relate" tab, and had the confusing and illogical layout of "Projects" under "Creatures." If you need automated image retouching, you'll need to use Photoshop. If you need to work off-line, you'll need to use Photoshop. If you want the updating speed of Lightroom, you'll need to use Photoshop. If you want better raw support than Lightroom can give you, you'll need to use Photoshop. In fact, no matter how much you love Lightroom, using it just isn't going to benefit you. And running Photoshop just won't hurt you either. Adobe Photoshop Lightroom 4 also encourages you to organize your photos properly. Unlike some other digital photo organizers, Lightroom does not require you to have an "Books" folder; in fact, the bag itself does not have a place for your photographs. The individual folders (which you can use, of course, for permanent album navigation) have already been built into the program and it's the best solution for organizing your photos without the clutter of folders, windows, and menus. Freehand for target areas, spot healing, and the other tools are also tied to the folder structure and can be accessed only within the specific folder. Overall, this method makes fine images and sloppy ones completely separate, although it's not entirely foolproof. The Location tool is also a good idea, but is slightly more difficult to find than I would have liked. And it's still a throwback to Photoshop, which

is better in that respect.

The substance of 3D is created in the camera and is independent of 3D in Photoshop. This approach means that the physical camera data and scene information has been captured in a new and powerful architecture that leverages the best of modern GPU APIs and the stability of modern desktop APIs. On iOS, the look of Substance will also represent the best of iOS. Also, notably, the integration into the [Adobe Creative Cloud](<https://cloud.adobe.com/>) and Adobe Stock will allow people to make creative 3D content wherever they are, and we will maintain the look of 3D across all platforms—including printers on the consumer side. However, on iOS, we won't have the depth, and will continue to have a 'two-dimensional' look in the 3D view. The native 2D and 3D GPU APIs in Photoshop are much more stable and consistent than what we had before on macOS. At the same time, we also need to develop the best modern APIs to make 3D experiences not only good but also easy to build. For desktop, we're moving away from layers and with a focus on the light layer. We're also making some fundamental changes to how the tool set works and to how edit controls' behavior work. For mobile, we will focus on the same high-quality API for the same experience Adobe is also adding a number of exciting new features to the Workflow panel, including the addition of the Merge to HDR Pro Panel (see below), the New Layer Group feature, and a content-aware fill functionality. As another feature rich, long-term roadmap update, we've also been seeing some significant changes to the way that color is managed in Photoshop. This change, which updates the Adobe's color matching engine, will result in richer skin and hair colors, more natural skin tones, an overall more accurate white balance, and an increased range of colors, including extended red and red-green channels. And don't worry that this means lowering the color fidelity, as there are plenty of ways that you can change and manage color after the update is finalized. Simply follow the prompts to ensure that your image settings are preserved.
