Web Hosting Talk has released its yearly list of domains that are up or down. According to the report, the number of .com domains that remain available jumped from 54 million to about 70 million at the end of the year. This represents an increase of about 25 percent. The number of .net domains, which remained steady at about 90 million, increased by about 9 percent. The number of .org domains available remained steady, hovering around 19 million. The app is starting to feel like a full-fledged Photoshop, and it does have an impact on digital photographers. It is enjoyable to see what

everyone finds appealing when they start to edit on their Mac, and it can be exhilarating. It starts to feel more like a full studio tool, especially when you see what's coming and what's coming next. You're not just creating images anymore. Here are the new things that the plugin version of Photoshop has:

- Content-Aware Fill: This tool is part of Photoshop CC and brings a new way of filling areas in too dark or too bright areas of the picture. This works in all the layers as well as with layers that have content-aware artboards.
- Retouch Groups: Use this if you have a series of edits that you want to go to. Create a new layer and select Retouch groups. You will see a menu with other templates in which you can select a template that is meant for a similar image. Once selected, you can then move the template and other settings to the new layer and can start doing the retouching.
- User-defined layers: this let you define layers in order, so you can work with them later and then name them. It makes it much easier when dealing with layers that have similar conditions.
- Content-Aware Enhanced Edge Detection: Enhance the edge detection for the best-suited filter.

The biggest change in this release is that it's the first major Photoshop Elements software to be available as a completely free download. This is good news for my business, as I can recommend it to everyone I encounter. It's also a relief for the millions of hobbyist users/memory keepers who, up to this point, had to download and purchase an application to create digital scrapbooks and clipart images. It's a big change for PhotoFunia, too, as this is the first major upgrade.
