It's quite up to date. The only exception is Lightroom 5. However, it simply doesn't live up to the name of the simple photo-editing software "Lightroom." Lightroom provides an all-purpose tool for non-professional photographers, and even if you don't want to use it for editing, it's just a great photo viewer. (I actually designed that name, by the way.) However, there are many excellent all-purpose photo-editing tools that are far more powerful than Lightroom. One example is Photoshop. A control surface for everything I do in post-processing - for all intents and purposes, I put Photoshop for graphics on my desktop instead of a more nimble, less expensive software. An illustrative example would be the overuse of after-effects filters in photos these days. They make looking at certain images impossible, to say nothing of acting as a distraction. In actuality, the three most useful computer programs I use are: So, anyone who says, "I can't afford Photoshop," doesn't really understand it. These days, a \$300 Windows 8 OS and 1 GB RAM is very cheap, and Photoshop is a great value. Previous versions cost nearly a thousand dollars for a single year. For the most part, the new and not-yet-released Lightroom 5 does not look all that different from the current version. You will not easily notice the differences, and maybe not at all if you use it for a month or so. The only thing that is a little different is the new camera tab, which shows thumbnails of the images you are currently viewing. It is very similar to what you can see when you use the Camera app on your iPhone 4s or later. The rest of the screen is still the exact same. The bottom of the screen has a few more workflows, which will be explained later on.
