For example, when you place a specific layer into a group and then add a new layer that is part of this group, nothing happens. In CS6 you had a list box to choose which group to place it in. I cannot find that list box in the CS6 or CS2019 version. Instead, you get to select one image from a bunch of images or select the entire folder. Also, the suggested group must stay empty for the layer you are placing in it. Otherwise, you get a prompt. But what if you want to add a layer to a group that has already been populated with layers and so the "Add to..." prompt opens a new window? It makes sense to choose a name for a group first. Especially if you have an "album" or "map" as an album would be. But it is a major letdown that you cannot name a group "Photoshop Elements." An era where your tools are universal is upon us. High usefulness, low cost, high customization are the features of the future. Innovation is a natural occurrence of today, and tools are the base. They become more powerful and more useful, but still affordable. PSD files contain everything needed for printability save for one single aspect: color. Color is the most important aspect of graphic art. Would you buy a car without power steering? Of course not; you'd be missing out on a huge amount of capability. Even if there are similar cars, without power steering you'll have to pay extra to get it, or have a different experience if you want to find out. No software wasn't designed to work without color, but color has been neglected in many programs, including the image-editing programs.
